Professional Summary

AI-in-Healthcare leader with 5+ years developing deep learning models into tools. Led development of a whole-slide image (WSI) diagnostic and prognostic pipeline trained on **2,500+ multi-site patient cases**; delivered a clinician-facing user interface and GPU-backed inference pipeline (A100/H100/A6000 SLURM clusters) that performs inference in minutes, reducing diagnostic turnaround from weeks to minutes and progressing toward Indiana University Health clinical validation.

Education

2016-2020 **Bachelor of Technology**, *Department of Electronics and Telecommunication Engineering*, *Shri Guru Gobind Singhji Institute of Engineering and Technology, Nanded*, Maharashtra, India.

Experience

December 2023 - Present **Research Data Analyst**, *Division of Computational Pathology, Indiana University School of Medicine*, Indianapolis, United States of America.

- Led development and translation of interpretable AI models for whole-slide images into a deployable clinical research tool supporting WHO-aligned diagnostic classification and prognostic stratification; trained and validated models on 2,500+ brain-tumor cases aggregated from >25 clinical sites.
- Built a clinician-facing UI and GPU-backed inference pipeline (A6000 / A100 on Quartz and BigRed200 SLURM clusters) enabling WSI inference in 10 minutes per slide, compared to multi-week turnaround for standard molecular workflows; demonstrated to 3 clinicians and staged for IU Health clinical validation. **News:** `https://medicine.iu.edu/news/2025/10/bakas-ai-glioma-identification`
- Translated complex model outputs into actionable clinical insights for pathologists and research PIs, supporting peer-reviewed publications and evidence generation toward clinical utility.
- Implemented reproducible, HPC-friendly training and inference workflows with standardized documentation, enabling scalable reuse across projects and institutions.

August 2022 - November 2023 **Visiting Associate**, *Center for Biomedical Image Computing and Analytics (CBICA), University of Pennsylvania*, Philadelphia, United States of America.

- Developed multimodal prognostic models for glioblastoma (imaging + clinical features), achieving an AUC ≈ 0.75 on test data (188 GBM patients across multi-institutional cohorts); co-authored manuscripts in Modern Pathology and Frontiers.
- Led imaging-side implementation, coordinated model experiments with collaborators, and delivered code for downstream validation.

January 2021-July 2022 **Assistant System Engineer**, *Tata Consultancy Services*, Pune, India.

- QA lead for cloud migration of transaction modules (legacy → AWS, Java/Spring Boot) for a leading U.S. financial client; owned API and end-to-end transaction verification, ensuring parity between legacy and cloud systems.
- Led a 6-person testing component across a multi-team cloud migration, improving deployment reliability and reducing post-migration incidents through comprehensive API and transaction-level validation.
- Collaborated with cross-functional teams and business Subject Matter Experts to validate complex transaction flows and support compliance requirements during migration.

March 2020-June 2020 **Data Science Intern**, *Nymo.ai*, Bangalore, India.

- Built edge inference pipelines for Automatic Number Plate Recognition (ANPR) and mask-detection; supported prototype-to-deployment deliveries for clients (one deployment delivered in ∼2 weeks).
- Delivered real-time inference (approx. 6-8 fps on edge devices), and implemented OCR integration for plate-to-text extraction (model accuracy ∼73% during internship).

Awards

2025 Best Paper Award for "AI-driven WHO 2021 classification of gliomas based only on H&E-stained slides" at Center for Computational Biology and Bioinformatics Retreat (CCBB), Indiana University, Indianapolis

2025 **5th prize** in LLM based report generation in pathology challenge (REG) held at MICCAI 2025, the 28th International Conference on Medical Image Computing and Computer Assisted Intervention.

2020 **2nd Prize** in semantic segmentation challenge on IDD dataset organized at Indian Conference on Computer Vision, Graphics and Image Processing (ICVGIP) at IIT Jodhpur, by IIIT Hyderabad, and Intel, India.

2020 Ranked among top 10 in retinal fundus glaucoma challenge (REFUGE2) held at MICCAI 2025, the 23rd International Conference on Medical Image Computing and Computer Assisted Intervention.

2020 Ranked among 10 in age related macular degeneration (AMD) challenge held at IEEE ISBI 2020, the International Symposium on Biomedical Imaging.

2019 **1st Prize** in semantic segmentation challenge on IDD lite dataset organized at National Conference on Computer Vision, Pattern Recognition, Image Processing and Graphics (NCVPRIPG),India, hosted by IIIT Hyderabad and Intel.

2019 Travel Grant awarded to attend National Conference on Computer Vision, Pattern Recognition, Image Processing and Graphics (NCVPRIPG).

Presentations

2025 Oral & Poster Presentation at 30th annual meeting of the Society for Neuro-Oncology (SNO 2025), Honolulu, Hawai

2025 Oral Presentation at 21st European Congress on Digital Pathology (ECDP 2025), Barcelona, Spain

2025 Poster Presentation at 116th annual meeting of American Association for Cancer Research (AACR), Chicago, Illinios

2024 Oral Presentation at 29th annual meeting of the Society for Neuro-Oncology (SNO 2024), Houston, Texas

2024 Two Oral Presentation at 20th European Congress on Digital Pathology (ECDP 2024), Vilnius, Lithuania.

2023 Oral Presentation & Poster at 19th European Congress on Digital Pathology (ECDP 2023), Budapest, Hungary.

Projects

- **Vision Language Model based report generation (REG 2025 challenge)**
  Vision language model developed to generate reports from gigapixel whole slide images.
- **Prognostic Risk Stratification of Gliomas**
  AI based prognostic risk stratification in adult-type diffuse gliomas with various pathology foundation models and multiple instance learning models.
- **Multiscale assessment of Whole Slide Image**
  Multiscale assessment of Whole Slide Image to identify WHO 2021 classification of glioma patients with various pathology foundation models and multiple instance learning models.

- **Oncocytic Renal Tumor Subtyping**
  Focus is to develop a computational algorithm for subtyping oncocytic renal tumors from H&E stained whole slide images (WSI).
- **Biomarker Identification in Gliomas**
  Focus is to develop a computational algorithm for biomarker prediction of glioma patients based on digital H&E stained whole slide images (WSI) using weakly supervised approach. We explore Self Supervised Learning based algorithms based on ViT and DINO.
- **Prognostic Stratification of Glioblastoma**
  Focus is to develop a computational algorithm for survival prediction of GBM patients based on digital H&E stained whole slide images (WSI) using weakly supervised approach. We also aim at interpretability analysis i.e. the important regions from WSI driving the decision.
- **Automatic Number Plate Recognition**
  Focus was on the development of novel and realtime algorithms for Automatic Number Plate Recognition. This algorithm implements end-to-end You Only Look Once (YOLO) based object detector and Mask-RCNN based Region Proposal Network.
- **Retinal Fundus Glaucoma Analysis (REFUGE2 Challenge, MICCAI 2020)**
  Algorithm for Retinal Fundus Glaucoma Analysis with segmentation of optic disc and cup, classification of glaucoma and localization of fovea is being developed. We leverage the power of Efficientnets and Unet for all the tasks.
- **Anamoly Pattern Segmentation in Agriculture(Agriculture Vision Challenge, CVPRW 2020)**
  Novel and effective algorithms is developed for agricultural pattern recognition from aerial images using Feature Pyramid Network as encoder and varying the decoder backbones.
- **Age Related Macular Degeneration (AMD Challenge, ISBI 2020)**
  Development of algorithms associated with the diagnosis of Age-related Macular degeneration (AMD) and segmentation of lesions in fundus photos from AMD patients with Convolutional Neural Networks.
- **Semantic Scene Segmentation in Unstructured Environment (AUTONUE Challenge, ICCV 2019 & NCVPRIPG Challenge 2019 & ICVGIP Challenge 2020)**
  Encoder-Decoder architecture is developed for semantic scene segmentation in unstructured environment with various backbones like InceptionResNetV2, EfficientNets using Deep Learning on Indian Driving Dataset (IDD) and IDD lite.
- **Skin lesion Segmentation and Classification (ISIC Challenge, MICCAI 2018)**
  Generative Adversarial Network based architecture is developed for skin lesion segmentation and classification with Convolutional Neural Network. The classification task is carried out with state-of-the-art networks like ResNets, MobileNets, Xception, EfficientNets.
